MTIX has developed a cost effective and environmentally friendly material synthesis technology featuring a virtual dry process and breakthrough technology for textile applications utilizing the MLSE® system that uses a combination of high voltage, high frequency electrical discharge plasma and laser energy to imbue textiles with desirable technical characteristics.

"We are looking forward to once again engaging with our shareholders, investors and the public. We believe our webcast format provides a great value to both the Company and its shareholders. It is our hope that through our webcasts, our shareholders, investors and the public can learn about each subsidiary and strategic investment, and begin to appreciate the intrinsic value they each provide. It is with this spirit, we look forward to this webcast rescheduled for March 15, 2018," said Milton "Todd" Ault, III, the CEO and Chairman of the Company. Ault added, "We anticipate this webcast focusing on MTIX will be very interesting and we will be happy to address questions from both the participants as well as those questions sent to DPW prior to the webcast. We are very pleased with our progress as we march forward to our goal of delivering the first finished units this year to MTIX, Ltd. In March of 2017, we announced the \$50M purchase order from MTIX. Our current investment in Avalanche International, although made over time, was due to our appreciation of the sustainable and disruptive add-value proposition of the MLSE® technology and the impact it will have on the textile industry worldwide. I suggest those interested in the future of DPW to participate in the webcast."
